

## Bottle Retention Strap (BRS2) Installation Instructions and Specifications

**Required tools:** None

**Included Parts:** 1 Base Strap    1 Neck Strap

1. **Slide closed loop over rod** - Hold the longer strap, the Base Strap, with the closed loop at the bottom and the raised VintageView logo facing *away* from you. Align the hole with a rod tip on the base side, the rods with the longer curve, of a WS-Series rack [Image A]. Gently stretch the loop of the strap over the rod tip and continue sliding the strap along the the rod toward the wall, until it is just past the curve [Image B]. Repeat the same procedure for the Neck Strap on the neck side, the rods with the short curve, sliding the strap just past the curve in the rod. Repeat this procedure for each set of Bottle Retention Straps.

2. **Place bottles and secure** - Place your bottles on the WS-Series racks, with the shoulder of the bottle close to the neck rod. Grip the neck strap by the tab with the raised VintageView logo and gently stretch the strap over the neck of the bottle, enough to hook the neck rod just in front of the curve in the rod [Image C]. Repeat the same process for the base strap, stretching it over the larger end of the bottle and hooking it to the near end of the base rod.

**Note:** For 2 and 3 deep WS-Series racks, straps for the bottles closer to the wall must be installed first and one set of straps is required for each bottle.

To remove bottles, gently stretch the straps enough to unhook the near end of both the neck and base straps, taking care to hold on to the strap until tension is released.
